

December 2, 2016
Andrew McKeon (Exec. Director, RGGI)

Andrew McKeon

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Goals of reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Sincerely,

Deborah Bloomer
1014 Bennett Way
Newmarket, NH 03857-2354
