Subject: Ensure a Stronger RGGI

Dec 4, 2012

RGGI State Commissioners and Staff

Dear State Commissioners and Staff,

The Regional Greenhouse Gas Initiative (RGGI) is a proven model for successfully reducing climate pollution while raising critical funds for reinvesting into green infrastructure development.

Strengthening the RGGI program is a common-sense approach for Governor Cuomo to take his words about the need to fight climate pollution, and turn them into direct action.

It is inexcusable for the cap on emissions to knowingly exceed the amount of annual pollution that occurs. The changes proposed by the RGGI states could result in millions of tons of additional climate pollution every year. That's more smog, more asthma attacks and more extreme weather for the foreseeable future. That's unacceptable.

New York can and should be a leader in environmental policy. Please work toward a stronger RGGI.

Thank you for your attention on this important matter.

Sincerely,
