Annual 2019 RGGI Market Monitoring Report Available

May 13, 2020 — The independent market monitor for the RGGI CO₂ allowance market continues to find no evidence of anti-competitive conduct, according to the [Annual Report on the Market for RGGI CO₂ Allowances: 2019](#), released today.

Prepared by Potomac Economics, the report evaluates activity in the market for RGGI CO₂ allowances in 2019, focusing on the following areas: allowance prices, trading and acquisition of allowances in the auctions and the secondary market, participation in the market by individual firms, and market monitoring.

Firms acquire RGGI CO₂ allowances in the primary market, mainly through quarterly RGGI CO₂ allowance auctions, and can also buy and sell CO₂ allowances in the secondary market. Participation by many firms promotes competition and helps ensure that CO₂ allowance prices are determined efficiently. The market monitor found that there was broad participation in the RGGI market in 2019, with allowance holdings remaining consistent with competitive expectations.

In reviewing the four auctions of 2019, the market monitor found no material concerns regarding the auction process, barriers to participation in the auctions, or the competitiveness of the results. The auctions were administered in accordance with the noticed rules and bids received.

In the secondary market, the market monitor found no evidence of anti-competitive conduct. Firms have generally purchased quantities of allowances that are consistent with their expected needs. The market monitor notes that a robust secondary market is beneficial because it provides compliance entities with more flexibility related to when they can purchase CO₂ allowances.

See the [full report](#), available on the [Market Monitor Reports](#) page of the RGGI, Inc. website, for more details on 2019 allowance prices, holdings, and market participation.

About the Regional Greenhouse Gas Initiative (RGGI)

The New England and Mid-Atlantic states participating in the fourth RGGI control period (Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont) have implemented the first mandatory market-based regulatory program in the U.S. to reduce greenhouse gas emissions. The 2020 RGGI cap is 96.2 million short tons. The RGGI states also include interim adjustments to the RGGI cap to account for banked CO₂ allowances. The 2020 RGGI adjusted cap is 74.3 million short tons.

RGGI is composed of individual CO₂ budget trading programs in each state, based on each state's independent legal authority. A CO₂ allowance represents a limited authorization to emit one short ton of CO₂, as issued by a participating state. A regulated power plant must hold CO₂ allowances equal to its emissions for each three-year control period. RGGI's fourth control period began on January 1, 2018 and extends through December 31, 2020. For more information visit www.rggi.org.

About the Regional Greenhouse Gas Initiative, Inc.

The Regional Greenhouse Gas Initiative, Inc. (RGGI, Inc.) was created to provide technical and administrative services to the states participating in the Regional Greenhouse Gas Initiative. RGGI, Inc. is a 501(c)(3) nonprofit organization. For more information, visit: www.rggi.org/rggi-inc/contact.
