Andrew McKeon (Exec. Director, RGGI)

Andrew McKeon

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Goals of reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Sincerely,

Kenneth Moller  
2 Ring's Way  
Brunswick, ME 04011-3946

Andrew McKeon (Exec. Director, RGGI)

Andrew McKeon

Protecting our land, air, and water resources from the harm due to climate change is a high priority for me. Reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The recent election results make our local acts critically important. The current 2016 review should not be delayed and updates should include AT LEAST a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Your state leadership has never been more important. Please finish the business of ensuring that our state is addressing this very real threat to our wellbeing and environment.

Sincerely,

B. Rein

Andrew McKeon

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Goals of reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Because national action on climate change is uncertain, our state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Thank you.

Sincerely,

Sissy Aron

Please don't back away from the proposed 5% annual RGGI reduction. You have great power to determine the destiny of the US and the world. With power comes responsibility. Don't back away from the proposed 5% annual reduction because of short term considerations. You know it is the right thing to do. So do it.

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Andrew McKeon (Exec. Director, RGGI)

Andrew McKeon

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Goals of reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Sincerely,

Al Nierenberg  
38 Herrick Rd  
Boxford, MA 01921-2102

Andrew McKeon (Exec. Director, RGGI)

Andrew McKeon

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Goals of reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Sincerely,

Alina Michelewicz  
7A Winter St  
Amesbury, MA 01913

Andrew McKeon

As a retired physicist, I believe in the need to reduce greenhouse gas emissions, conserve energy, and invest in non-fossil fueled energy sources (not excluding nuclear).. As I cycle around the greater Worcester area, I see carbon-storing forests being cleared to make way for huge houses, perhaps presaging another financial crisis. Too much investment in the US has been directed into real estate rather than enhancing global competitiveness. Sprawl increases transportation impact on health and the environment.

In the absence of congressional action, a positive step has been the Regional Greenhouse Gas Initiative (RGGI).

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

We can't wait for national action.

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Andrew McKeon

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Goals of reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Sincerely,

Katie Rudy

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Sincerely,

Courtland Booth  
144 Wright Rd  
Concord, MA 01742-2068

Andrew McKeon (Exec. Director, RGGI)

Andrew McKeon

As an outdoor enthusiast, protecting land, air, and water from the threats of human caused climate change is a priority for me. Goals of reducing carbon emissions, conserving energy, and investing in energy efficiency and renewables must all be part of the path forward. The Regional Greenhouse Gas Initiative (RGGI) has been, and should remain, an important tool to achieve these goals.

I applaud your past support of RGGI and urge you to improve the program. The current 2016 review should not be delayed and updates should include a 5% annual reduction to the overall cap from 2020 levels through 2030. The program update should also include modifications that ensure the true cap levels are met, and that reductions are not compromised by the banking of pollution credits.

Because national action on climate change is uncertain, your state leadership has never been more important. Please finish the business of updating RGGI and ensure our state is doing its part to address this very real threat to our wellbeing and environment.

Sincerely,

Jeffrey Williams
