

To whom it may concern:

I'd like to support strengthening the RGGI program. It has done a lot of good in New England already by cutting down on pollution and enabling states to invest in energy efficiency as well as clean energy. Please decrease the cap by 5% a year so we can continue to cut harmful pollution out of our air, leading to healthier people and a healthier planet.

We can have a cleaner environment and still have the power we need for a robust economy. Innovation in solar panels, heat pumps, wind farms, and battery storage are all helping to lessen our dependence on fossil fuels and their dangerous warming of the planet. Serious attention to energy efficiency is making a huge difference in lowering demand. Grid modernization promises to flatten out the demand peaks. Please use RGGI to its full potential. Our future is depending on it!
